

Flare Alternative

Traditional Flares:

- Burn at 1,400° F
- Are fire hazards
- Are burn injury hazards
- Can easily burn through safety turnouts
- Use toxic phosphorous chemicals
- May explode if in contact with water
- Can splatter burning particles many feet
- Will roll in windy conditions
- Must be completely extinguished after use

SnapLight® 10" Flare Alternative:

- Emits no heat
- Produces no flames
- Will not cause burns
- Contains no toxic chemicals
- Requires no batteries
- Meets DOT non-hazardous standards
- Is waterproof
- Is self-contained
- Fits into metal bipod stand to prevent rolling
- Can be simply tossed in the trash after use
- Available in 30 minute or 2-hour durations
