

What Are LightStations?

LightStations by Cyalume Technologies, Inc. provide the ideal emergency lighting system. Because they are not battery or generator dependent, you know you can depend on them when you need emergency light.

How many times have you reached for a flashlight to find that it didn't work? Batteries can fail. Just like flashlights, battery or generator operated emergency lighting systems can't always be relied upon when the lights go out.

Even if your emergency lighting system is in top form, how many areas of your building does it not reach? Buildings usually have many areas that would be in total darkness during a power outage - rest-rooms, supply rooms, kitchens, engineering rooms, stairwells, and more. LightStations can be installed anywhere to provide dependable emergency light where and when you need it.

LightStations are powered by SnapLights which

- produce safe, reliable, chemical light for 4 hours
- visible are for 360°
- emit no flames or sparks
- are ready to use for years

Each LightStation™ has a photoluminescent label on the front that makes it easy to locate in the dark. Operation couldn't be easier - by pulling the front cover down, SnapLights are ready for users to light their way.
