

Super-Spreader®

INSTRUCTIONS

The **ALL NEW Super-Spreader®** combines common sense and innovation with advancements in reflective surface technology to produce a truly **Super Light Spreader!**

The new design is attractive, lightweight and easy to install. The 'Spreader Heads' are made from 95% reflective glass coated Aluminum with a prismatic micro-textured surface.

This incredible alloy is Super Cool, Super Reflective and creates Super Even light distribution. The prismatic surface reflects and redirects light in a selective 4-way pattern for incredible results!

How & Why They Work! The design of the **Super-Spreader** is based on logic and simplicity. All horizontal reflectors create an over hot, over bright spot directly beneath the lamp.

The **Super-Spreader** spreads the excess light and heat proportionally to all areas of the grow room (especially the corners and edges which are often under lit). This creates even light and more harmonious growing conditions throughout the entire grow room.

NOTE: By attaching the Super-Spreader accessory, the Adjust-A-Wings® performance may be enhanced significantly.

Adjust-A-Wings fitted with **Super-Spreader** can be lowered to an unprecedented 10"-12" from growing plants to produce awesome growing power while maintaining maximum area coverage and minimum heat build up.

Yield increases of up to 50% are not uncommon with proper use of this truly outstanding product.
