

TCP is proud to have been awarded ENERGY STAR® Partner of the Year 2010.

TCP is committed to providing high quality CFLs that are the benchmark in energy efficiency. Our compact fluorescent light bulbs use 75% less energy than standard incandescent bulbs and last up to 12 times longer.

ENERGY STAR® qualified lamps must pass several test criteria. For example, all ENERGY STAR® qualified lamps must be designated by a specific color temperature; 2700K, 3000K, 4100K, etc. Consumers typically relate these color temperatures to words like warm white, bright white or cool white. These lamps must fall within a 7-step ANSI MacAdam ellipse for that color temperature, which ensures color consistency in the manufacturing process.

In addition to the technical aspects of bulb testing, the product packaging must tell a true story to the consumer. The packaging of an ENERGY STAR® qualified CFL must list numerous components and features of the lamp, and be supported with test data.

By selecting energy saving lighting, you will be working toward reducing your energy bills and significantly reducing greenhouse gases into our atmosphere. TCP's ENERGY STAR® qualified CFLs save \$30 or more in electricity costs over the lifetime of each bulb. TCP is proud of our diversified selection of ENERGY STAR® qualified CFLs.

All of TCP's CFLs listed on both sides of this sheet have undergone rigorous testing as required by the ENERGY STAR® 4.0 program. In order for a CFL to earn the ENERGY STAR® it must pass various photometric, electronic, life performance and packaging tests. New to the ENERGY STAR® 4.0 specification are requirements such as committing to manufacture CFLs with no more than 5mg of mercury in lamps less than 25 watts and 6mg of mercury in lamps 25 watts up to 40 watts. Additionally, reflector lamps intended for indoor qualification must pass elevated temperature lumen maintenance testing, similar to life in a recessed can, a typical application for reflector lamps.
