

Digital Control Panels

Intermatic Digital Control Panels provide control for three circuits, making them ideal for total pool, garden and landscape lighting control, and also offer remote control capabilities.

- Compared to competitive digital controls, Intermatic's line of digital time switches are the easiest to install and program
- Intermatic digital time switch mechanisms snap into existing control panels for retro fits and upgrades – allowing the contractor to use the existing enclosure if the homeowner wants to upgrade to a digital time switch
- When two-speed pumps are required for energy management, Intermatic's PE series circulates the pool during the day on low speed and then runs at high speed during the evening when more energy is available and prices are lower
- Memory backup for added protection during power outages
- Heater protection (Fireman Switch)
- 120 or 240 Volt input
- Three ON/OFF events per circuit
- Countdown feature for service and maintenance
- Five modes of operation including two-speed pump and pool cleaner pump applications
- Manual override feature
- CD available for programming and training
- Optional remote control (Part number 133PE1484A)
- Optional freeze protection (Part number 178PA28A)
- Available in both plastic and metal Nema 3R enclosures
- Available with 60, 100 and 125 amp breaker bases
- Made in the USA for ensured reliability

See details on page 22.
