Dual Outlet Analog Timer
TM01015D

The Timer wheel can rotate clockwise only. There are 4 segments per hour and each representing 15 minutes.

Operating Instructions：

a. Ensure the timer is disconnected from the electrical supply

b. Press down the segment(s) according to your desired time
  period for the appliance to be powered on. Each segment represents 15 minutes, For example ,if you want your appliance to turn on for 30 minutes, you would press 2 black segments down)

c. Turn the Timer face dial until the pointer (▶) is set to the current time

d. Plug your appliance into the Timer Plug and slide the switch on the side to

the timer setting 🕒

Note: If you slide the switch to ⌐, the timer plug bypasses the timer functions and supplies power all the time.
