

Testimonials

What our Customers Say...

We have carried the Paraclipse® line of insect control devices for the past several years. We have been pleased with the line for the following reasons:

- Quick and accurate shipping
- No product return issues, the units seem to hold up well over time
- Availability of marketing materials and product training

Paraclipse® is a good company with helpful staff and a quality product.

Paraclipse® will be a great addition to our product line. Not only are we providing a benefit for our customers, but we are the only one to actually service the units in our area. It's a very simple sales technique, show & tell - then install the units. We had a three week pre-book promotion and installed 54 units during the first two weeks. The third week we encountered very cold & snowy weather. I think if the weather would have been more cooperative, we could have doubled the units in that time frame. Our goal is 300 units during this initial period, which I feel we should have no trouble achieving.

Flies are a constant problem in our restaurants. They come in through the rear service doors, the front customer entrance door, and the drive-up window. We have tried several different types and brands of fly traps, but none of them have been satisfactory - until recently. We saw the Paraclipse® line of fly control devices at the National Restaurant show a couple of years ago and decided to try the Ultra Insect Inn™ model in several of our restaurants. The results have been terrific. Customers no longer complain about the flies and the health inspectors are no longer 'on our case!' This year we installed your Paraclipse® Terminator™ unit in all of our kitchens with good results. You have a great product and friendly customer service.

August 16, 2007 - During the summer months we have extensive problems in the paint building with flying insects sticking to wet paint before it dries. It was so bad yesterday, we were reworking more parts than we were getting out. This rework involved sanding paint off defective parts and repainting.

I remember seeing your product advertised somewhere and thought it could help us out. I quickly order a Paraclipse® Terminator™ and picked it up Wednesday night. I delivered it to the paint line supervisor at 7:00 this morning. He grabbed it and plugged it in right away in the area between the paint booth and the bake oven. When I saw him an hour or so later he said the unit is working great and he hadn't had a single painted part get ruined by flying insects. He said it worked so well he had me order another unit for a different area. Just in one day that one unit saved us several hundreds of dollars in rework plus it allows us to get parts through on time and avoid missed shipments.
